1 About Brainworkup

Brainworkup is a clinical neuropsychology practice specializing in **pediatric** and **forensic** neuropsychological assessment, founded by Dr. Joey Trampush. With over 20 years of experience in clinical neuropsychology and a faculty appointment at USC Keck School of Medicine, Dr. Trampush bridges rigorous academic research with compassionate clinical care.

2 Clinical Services

2.1 Pediatric Neuropsychological Assessment

Comprehensive evaluations for children and adolescents addressing concerns related to attention, learning, memory, executive functioning, and emotional regulation. Each assessment produces a detailed, actionable report designed for parents, educators, and treatment providers.

2.2 Forensic Neuropsychology

Expert neuropsychological evaluations for legal proceedings, including personal injury litigation, criminal defense, and educational due process hearings. Reports meet evidentiary standards and Dr. Trampush is available for deposition and trial testimony.

3 Research & Publications

Dr. Trampush's research focuses on the intersection of **psychiatric genetics**, **cognitive genomics**, and **neurodevelopment**, with particular emphasis on ADHD. Key areas include:

- Genome-wide association studies (GWAS) of neurocognitive phenotypes
- Polygenic risk scoring for cognitive and psychiatric outcomes
- Neurodevelopmental trajectories in attention-deficit/hyperactivity disorder

4 Contact Information

Schedule an Evaluation

To schedule a neuropsychological evaluation or request a consultation, please visit brainworkup.org or contact our office directly.

5 Sample Data Display

Here is an example of how clinical data might be presented:

Domain	Standard Score	Percentile	Classification
Verbal Comprehension	112	79th	High Average
Visual Spatial	105	63rd	Average
Fluid Reasoning	118	88th	High Average
Working Memory	95	37th	Average
Processing Speed	88	21st	Low Average

6 Code Example

For colleagues working with neuropsychological data in R:

```
# Compute composite scores from subtest data
library(dplyr)

npsych_data |>
  group_by(patient_id) |>
  summarise(
    verbal_composite = mean(c(similarities, vocabulary, information)),
```

```
executive_composite = mean(c(trails_b, wcst_persev, stroop_cw)),  
memory_composite = mean(c(cvlt_total, rocf_delay, lm_delay))  
)
```

7 Typography Showcase

This section demonstrates how the brand typography renders across different elements.

7.1 Heading Level 3

7.1.a Heading Level 4

Bold text for emphasis. *Italic text* for technical terms like *neuropsychological assessment* or *executive functioning*. Inline code like `WISC-V` or `ADHD-RS-5` for test names and measures.

“The goal of neuropsychological assessment is not merely to assign scores, but to understand the developing mind in context.”
